

WATER WITH A DIFFERENCE

We all know that plastic is an environmental no no, right?

But do you have any idea why? What if we had to tell you that us humans potentially use up to one million plastic water bottles per minute. Yip, that's right, that's an astounding 1,5 billion bottles a day. And that's not even the worst part. Plastic can only be recycled around 7 times and it also takes up to 8000 years to biodegrade. Scary stuff.

That's why at 15 on Grace,

we're doing our bit to be environmentally conscious by using aluminium to package our still and sparkling water. Unlike plastic, aluminium can be recycled endlessly and it also takes a lot less energy to manufacture, which in turn decreases carbon emissions.

So, every time you drink one of our waters,

you too are doing your bit to help us save this awesome planet that we like to call home, one can at a time.

15 on Grace. Water with a difference.
